

Seminar on Low Vision by the Laboratory Verbal and Lissac Optician - "For a better understanding of the sensitivity to the light: pathologies, stakes and solutions".

A seminar regarding the sensitivity to the light took place in Paris last June 8th. The Ophthalmic Laboratory Verbal, company specialised in the manufacturing of filters, CPF and LUCEO, and Lissac Optician, organised this seminar on Low Vision, mainly dedicated to professionals "orthoptistes". This event encounters a great success and was covered by the professional press. Not less than 100 participants came along. Dr Beatrice Le Bail took the chair of this seminar and explained the different pathologies linked to low vision. This intervention was followed by the presentation of 2 experts into visual rehabilitation, also lecturer at the hospital "Hôtel Dieu" in Paris, Mrs Christiane Hervault and Céline Sonnet, on contrasts and glare. Afterwards, Miss Annabel Briocher explained how to consider ergonomics and the light. Finally, Mrs Veronique Garcia, Low Vision Products Manager in Verbal and Mr Louis Philippe Da Rocha, Manager of the low Vision department in Lissac Rivoli Paris, showed us their methodology to adapt coloured filters and improve their use.

All those presentations managed to prove the efficiency of filters in the low vision field; products developed and manufactured in exclusivity by the Laboratory Verbal.
